

The Sint-Janscathedral

Constructionname	The Sint-Janscathedral
Application coating	Schildersbedrijf Brabander
Coated parts	Clock and cramp-irons
Completion	May 2021
Location	's-Hertogenbosch

Schildersbedrijf Brabander is a painting company that exists over 100 years and they have a very wide range of services they provide. From industrial coating to the restoration of monuments. Schildersbedrijf Brabander works with the products of Baril Coatings for years now especially when it comes to steel constructions.

Two company's from the same city, s-Hertogenbosch, that work on the symbol of that city: the Sint-Janscathedral.

The Sint-Janscathedral in the heart of 's-Hertogenbosch is a national monument. It finds its origin about the year 1220, but the building gets the shape as we know it nowadays when they started to build in gothic architectural style around 1380. Willem van Kessel was responsible for the design. The building is seen as a highlight in Brabantse gothic (a gothic style that was typical for the region). In 1559 the Sint-Janschurch was elevated to cathedral.
